Research

- My long-term research goal is to understand the workings of our minds. Specifically, to help find the computational principles that give rise to the mind. In pursuit of this goal, I am working on various aspects of continual learning, reinforcement learning, and deep learning
- I have contributed to exposing a fundamental problem with deep learning systems, where these systems can lose the ability to learn new things. I also developed the continual backpropagation algorithm to overcome this problem. This research has been published in Nature and featured in some popular media outlets and podcasts.

Technical Skills

- Proficient in languages like Python and C/C++. Eight years of experience with Linux-based operating systems, Shell scripting (Bash), and version control (Git)
- In-depth experience with machine learning and linear algebra libraries like Pytorch, Numpy, Pandas, sklearn
- Ability to communicate clearly as demonstrated by published works and public presentations
